CAREER OBJECTIVE

Computer Science student with a strong foundation in programming and applied AI, with hands-on experience in building intelligent applications using LLMs, RAG pipelines, and vector databases. Skilled in designing scalable AI systems, working with frameworks like LangChain, and integrating models into real-world solutions. Focused on developing efficient, practical, and user-centric AI applications.

EDUCATION

B.E. Computer Science and Engineering 2023 – Present
Rathinam Technical Campus CGPA: 8.5

Higher Secondary School 2022 – 2023
Sri Ragavendra Matriculation Higher Secondary School Percentage: 71%

SKILLS

Data Science: Python (Pandas, NumPy, Scikit-learn), R, EDA, Feature Engineering, Data Visualization (Matplotlib, Seaborn), Supervised Learning, Unsupervised Learning, Model Evaluation

Programming & Tools

Java, C, Python, GitHub, Power BI, Excel, PostgreSQL, MySQL

AI Technologies

n8n, LLMs, Langchain, Claude API, RAG, Agentic AI

Soft Skills

Effective Communication, Adaptability, Leadership, Time Management

INTERNSHIPS

Data Science Intern - Adventure Technologies

Built and optimized machine learning models for predictive analytics, improving forecasting accuracy by **88%**, while performing data cleaning, feature engineering, and EDA on structured datasets; used **SQL** for data extraction and analysis.

Data Science Intern - Internboot

Performed **data cleaning**, **preprocessing**, and **exploratory data analysis (EDA)** on structured datasets using **Python (Pandas, NumPy)** to uncover trends and patterns; applied **SQL** for data extraction and validation. Created visualizations and dashboards to present insights clearly and support data-driven decision-making.

PROJECTS

Pothole Detection System - YOLOv8

Developed a YOLOv8-based computer vision system to detect potholes and enable users to report and track road issues through an interactive map.

Agri Chatbot - Python, Streamlit

Engineered an AI-driven agricultural chatbot leveraging Retrieval-Augmented Generation (RAG) to deliver precise, context-aware agronomic insights. Implemented FAISS-based semantic retrieval with HuggingFace embeddings and deployed via a scalable Streamlit interface

Heart Disease Predictor -Pandas, Numpy

Built a machine learning model to predict heart disease using patient data; performed preprocessing and EDA, applied classification algorithms, and evaluated performance using accuracy, precision, and recall.

CERTIFICATIONS

Foundations of Machine Learning - AWS

Intermediate R - DataCamp

Data Visualization and Dashboards with Excel and Cognos - Coursera
